# Study of exotic states in $J/\psi$ decays

J.Z. Bai, et al

## Abstract

Using 58 M  $J/\psi$  events collected in the BESII experiment, we perform searches and studies on many interesting states, including the  $\xi(2230)$  in radiative  $J/\psi$  decays, a structure near  $p\bar{p}$  mass threshold and the X(1440) in  $\gamma\gamma\rho$  and  $\gamma\gamma\phi$  final states.
